

## TECHNICAL BULLETIN — No. 07-09-1544 CSA/CEC SECONDARY PROCESS SEAL APPROVAL FOR MODEL 7800 & 7850 I/P TRANSDUCERS

October 22, 2007

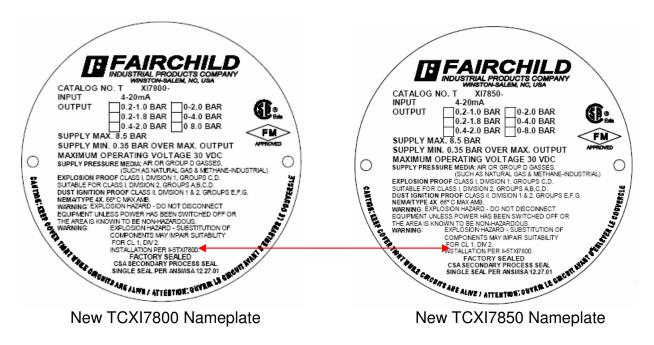

Fairchild Industrial Products' TCXI7800 and TCXI7850 I/P pressure transducers have received full approval from CSA for its CEC compliant secondary process seal design, as a single seal configuration, in accordance with ANSI/ISA 12.27.01:2003 specification.

This CSA approval was granted to Fairchild's <u>existing seal design</u> which is now and always has been incorporated into every Natural Gas supply approved configuration of the model TCXI7800 and TCXI7850 transducers. These models **continue to be manufactured with this CSA approved seal design**. Accordingly, any previously purchased Fairchild TCXI7850 or TCXI7800 natural gas style transducers were made with the identical sealing arrangement and to the same specifications as are now approved by CSA as a secondary process seal.

## FAIRCHILD INDUSTRIAL PRODUCTS COMPANY **TECHNICAL BULLETIN** — No. 07-09-1544

Fairchild is changing the nameplates of the TCXI7800 and TCXI7850 to show full compliance and CSA approval. The drawings below depict the new label nameplate which will be available soon.

As shown above, the lower portion of the nameplate will indicate the CSA Secondary Process Seal approval and the ANSI/ISA spec level. The units retain the "Factory Sealed "certification. When available, these new nameplates will be used for every CSA approved TCXI transducer manufactured at Fairchild. In the interim, Fairchild has obtained permission from CSA to apply a sticker to each model TCXI7800 and TCXI7850 product to designate compliance with the new Secondary Seal Approval level. The sticker will include all pertinent CSA information, in the configuration depicted below:

CSA
SECONDARY
PROCESS SEAL Single Seal
Approval
per ANSI/ISA
12.27.01:2003

This sticker will be used for existing finished goods inventory as well as all new production until the new nameplates are available.
